W14-P3: Get products from url (<https://course-api.com/javascript-store-products>)

Btn filter

The screenshot displays a web application with a product catalog and a filter interface. The 'Company' filter is active, showing products from Ikea, Marcos, Caressa, and Liddy. The code in the background shows the logic for filtering products by company.

Company Filter:

- All
- Ikea
- Marcos
- Caressa
- Liddy

Products:

- Accent Chair: \$2599
- Wooden Table: \$4599
- Dining Table: \$699

Code Snippets:

```
const btns = document.querySelectorAll(".company-btn");
let data;

document.addEventListener("DOMContentLoaded", async () => {
  const response = await fetch(url);
  data = await response.json();
  console.log(data);
  displayProducts(data);
});

btns.forEach(btn => {
  btn.addEventListener("click", (e) => {
    const company = e.currentTarget.innerHTML;
    const filterData = productsFilter(company);
    displayProducts(filterData);
  });
});

const displayProducts = (products) => {
  // ...
};

const productsFilter = (company) => {
  const filterData = data.filter((product) => {
    if (product.fields.company === company) {
      console.log("company", company);
      return product;
    } else if (company === "all") {
      console.log("company all");
      return product;
    }
  });
  return filterData;
};
```
